Profile

Software engineer based in Tokyo with production experience in Ruby on Rails and full-stack web development, plus a research background in applied NLP with large language models. Currently responsible for error triage across production and staging, and for authoring OpenAPI specifications, for a customer-facing real-estate investment platform serving native iOS and Android apps. Comfortable working cross-functionally with partner engineering teams in Japanese (JLPT N2).

Experience

App Engineer

2024/11 – Present

GA Technologies

Roppongi Ichome, Tokyo, Japan

- Own error triage on production and staging for OOWNER, GA Technologies' customer-facing real-estate investment platform that integrates with 14 internal and external services across 4 engineering teams: classify issues from Rollbar alerts as domain-service, infrastructure, or application bugs, investigate via CloudWatch, CloudTrail, and ECS container logs, cross-check against a Snowflake data mirror, and coordinate with domain-service owners to confirm root-cause hypotheses.
- Author and reconcile OpenAPI specifications against live implementations for OOWNER's APIs (30+ endpoints so far, out of 100+) as part of a company-wide initiative to eliminate duplicated, stale API documentation across provider and consumer services, including the iOS and Android client teams.
- Identified and resolved production data-integrity incidents on two occasions, coordinating with domain-service owners to correct the underlying inconsistency and confirm the fix.
- Migrated legacy RSpec fixtures to FactoryBot, improving test readability and reproducibility, and replaced persistent `create` calls with in-memory `build` calls where possible to speed up CI/CD test runs.

Software Developer

2021/03 – 2022/08

Artuvic Limited

Kingston, Jamaica (Remote)

- Led frontend and backend enhancements for a nationwide courier platform (AngularJS, Java Play Framework), including model design for a new system and CSV-driven API integrations.
- Designed and implemented role-based access control and security features; built internal admin tools for operations and user management.
- Wrote JUnit unit tests for new system components and managed releases via Sourcetree.

Research & Internships

Research Intern, NLP

2023/09 (3 weeks)

Fujitsu Ltd.

Kanagawa, Japan (Remote)

- Surveyed tokenization and embedding methods for low-resource NLP domains, focused on endangered-species corpora, and presented technical recommendations to Fujitsu's NLP Research team.

Software Intern

2020/06 – 2020/08

The Palisadoes Foundation – Calico Challenge

Kingston, Jamaica (Remote)

- Implemented encrypted communication between a central API and distributed data-collection agents for an open-source monitoring system (Pattoo) in Python, and built a React/Tailwind CSS admin portal for managing users, agents, and data pipelines.

Master's Research

- Designed and evaluated an LLM-based pipeline to convert taxonomic Named Entity Recognition (NER) datasets from Standoff to CoNLL format, benchmarking accuracy against rule-based conversion systems.
- Demonstrated the approach as a viable alternative to rule-based conversion, improving dataset interoperability and model training throughput.

Education

Nara Institute of Science and Technology (NAIST)

2022/10 – 2024/09

Master of Engineering, Natural Language Processing

Nara, Japan

MEXT (Monbukagakusho) Scholarship recipient, Japanese Embassy recommendation

The University of the West Indies, Mona

2018/08 – 2021/09

Bachelor of Science, Computer Science (Minor: Japanese)

Kingston, Jamaica

Skills

Languages: Ruby, Python, Java, JavaScript, SQL

Frameworks: Ruby on Rails, AngularJS, React, Flask, Next.js

Infrastructure: Docker, AWS (ECS, CloudWatch, CloudTrail), PostgreSQL, Snowflake

Practices/Tools: RSpec, FactoryBot, TDD, OpenAPI, Git

Spoken Languages: English (native), Japanese (JLPT N2, business working proficiency)
